ABSTRACT

The demand of soybean increase year by year, thus Indonesia has to import to fulfill domestic supply. The land for paddy planting is potential for soybean planting. The development of planting soybean in the next time will be on the centers area of production. Base in soybean price prediction, the soybean farmer will be on the centers area of production. Base on soybean price prediction, the soybean farmer will be profitable. Besides, it will give long time guarantee considering the other producer country such as Argentina, China, and India also need it in the great demand. Therefore, the stock of soybean world will steady and consequently the price and stock will stable. Daerah Istimewa Yogyakarta will reduce demand of soybean from outside region by carry out production extension. Productivity will be boosted by using high quality seed, taking integrated treatment of weeds and plant disease, repairing the land fertility by giving optimal fertilizing, adjusting the planting season and plant rotation, giving knowledge in planting for soybean farmer also offering farming credit.
