Abstract

Resolution WHA (World Health Assembly) No 64/56 Mei 2011, was an International Health Policy which change international mechanism on pandemic influenza global countermeasures. Before this Resolution has ratification as official rules for pandemic influenza countermeasures there was set old mechanism called Global Influenza Surveillance Network (GISN). GISN was built in 1952, and had been working more than 60 th, to help people for being handle the human global disaster cause by influenza virus. GISN was effective and efficient mechanism to figure out pandemic influenza case in world. That was be done on coordination, dedication and expertise laboratories in entire world. This network has be able to continue supervision evolution deployment and influenza virus distribution. Therefore, GISN could be provided timely data and other information, a lot of comprehensive precept, recommendation, and health produce so it is could be foundation for pandemic influenza preparedness.

Although was an international establishment mechanism, GISN have some weakness that is asked for reformation. GISN didn't have official rules to guard all process of pandemic influenza countermeasures. This weakness cause many problem where is incur losses development countries which is near to pandemic influenza case. Based on that problem Indonesia and other development countries demand WHO (World Health Organization) to change international mechanism on pandemic influenza (GISN) so be compatible and will be done on three principles; equity, equality and transparent

Kay word; pandemic influenza, WHO, Resolution, World Health Assembly, international mechanism.
